Smart Video Door Lock

DDL303-VP-5HWS

Remote unlocking

Easy life is under control

DDL303-VP-5HWS supports Wi-Fi networking and integrates the door viewer, doorbell, and door lock in one. With no space restriction, it allows to view the access logs and remotely unlock the door via the Smart Life App in one step.

Realtime's on Wi-Fi connection

The Philips DDL303-VP-5HWS supports Wi-Fi networking. After binding the Smart Life App, you can view the lock parameters and access history, remotely generate a 6-hour valid temporary PIN code without space restriction, allowing relatives and friends to enter the door easily even if you are not at home.

One-click remote unlock

The "#" key is used both as a doorbell button and a "#" key. When the door lock is in sleep mode and the visitor presses the "#" key, the doorbell will ring, and the camera will immediately capture the photo and uploads it to the Smart Life App. After viewing the log message and confirming the visitor's information, you can unlock the door remotely through the Smart Life App, allowing the visitors to enter the door at ease.

3.5-inch IPS screen

The inside escutcheon equips with a 3.5-inch IPS display, which can instantly check the situation at the doorway so that every family member can see the doorway without opening the door.

Indoor quick opening

The inside escutcheon of the door lock equips with a quick-open handle and a rotary knob. If an emergency leads to the malfunction of the smart door lock, it does not affect the opening of the door lock. Rotating the handle or the rotary knob allows emergency egress, which could ensure the users' safety.

20-digit hidden PIN code

Featured with the 20-digit hidden PIN code technology, Philips DDL303-VP-5HWS allows you to enter any random number combination for verification and unlock the door as long as there is a consecutive input of the valid password. This feature can effectively prevent peeping and safeguard the real password.

Multiple alerting

Featured multiple alerts such as anti-dismantling, system locking, and low battery level, Philips DDL303-VP-5HWS instantly safeguards the family and reminds you of the lock status, making you feel assured and secure.

Universal structure design

Philips DDL303-VP-5HWS adopts the universal structure design, which fits for multiple general mechanical mortises*. You are allowed to enjoy easy smart life without replacing the general mechanical mortise. Further, DDL303-VP-5HWS can be installed on various types of doors, such as wooden doors, security doors, and it also fits for doors equipped with concealed lock rods, allowing you to have an easy installation experience.

* General mechanical mortises: generally refers to the Chinese standard 6068 type mechanical mortise, that is, the general mortise with a backset of 60mm and a center distance of 68mm. For details, please consult our local dealer or consumer care service center.

● Specification

General Characteristics		Master fingerprint/ Master PIN code/ Master key tag Total: 9 sets (code range: 1~9)		Safety	
Material	Aluminium alloy			Hidden PIN code	
Finishing	Electroplating Baking varnishing	User fingerprint/ User key tag/ User PIN code Total: 291 sets (code range: 10~300)		Dual verification
